Hiring Team

BNY - TSG Eagle Infrastructure Team
Pune, India

Dear Hiring Team,

I am writing to express my interest in the Vice President, Production Services Infrastructure Support role at BNY's TSG Eagle Infrastructure team in Pune. With 20+ years of enterprise infrastructure and operations leadership across financial institutions - including ADP, Charles Schwab, BMO, RBC Insurance, and Microsoft - I bring the depth of production ops experience and the automation mindset your team needs to both stabilise and scale.

Production services ownership has been the constant thread across my career. At Microsoft, I held full accountability for Windows Server and Linux infrastructure administration serving US, EMEA, and APAC subsidiaries - owning incident response, root cause analysis, and 99.99% platform uptime over seven consecutive years. At RBC Insurance, I designed the Robo Deployment Framework: a PowerShell-native CI/CD orchestration platform that standardised Windows services, SQL Server, Oracle, and SSIS deployments across 250+ applications while enforcing SOX/GDPR-compliant change governance. At ADP, I led an ITIL-aligned incident and problem management transformation across a 35-member operations team, reducing MTTR by 40%+ through Ansible-automated remediation integrated with Dynatrace alerting - a direct example of the automation and optimisation mandate in your JD. Across all three engagements, Azure was a core platform: infrastructure provisioning, HA/DR migration pipelines, and full-stack observability at banking scale.

The automation and optimisation dimension of this role is where I add distinct value. The modeas platform I delivered handles 200+ builds and deployments per hour, eliminating 10,000+ manual operational hours annually - production-tested at a major financial services firm. I have applied the same discipline to vulnerability remediation pipelines (SAST/DAST/IAST at RBC, shift-left security across 250+ applications) and to zero-downtime infrastructure migrations at scale (Adobe's full data centre relocation, BMO's on-premise to AWS migration). Your requirement for Ansible role-based automation and Python scripting aligns directly with tooling I have deployed at production scale.

I am based in Pune and available immediately for onsite engagement. I would welcome a conversation to discuss the Eagle Infrastructure team's roadmap and how my background maps to your priorities.

Warm regards,

Pavan Kumar Nayakanti

Infrastructure & Operations Leader | 20+ Years | FinTech & Banking
