Director, Global Delivery & Operations -- IDC Site Lead

Fluke Corporation | 18 May 2026

Dear Hiring Manager,

Fluke's Year 1 success criterion -- *"IDC has a clear identity as Fluke's global delivery engine, not a staff augmentation center"* -- is exactly the mandate I have been executing for the past nine years. As India-side delivery lead at IRIS Software, I simultaneously owned delivery outcomes for ADP, Charles Schwab, and BMO: three of North America's largest financial institutions, each with their own CXO stakeholders, delivery cadences, and cross-timezone execution requirements. I built those teams from the ground up, governed vendor SLAs through operational scorecards, and reported delivery health directly to VP and C-suite audiences. The Fluke IDC Director role is where I formalise that accountability under a single mandate.

The specifics of your JD map directly to what I have built and measured. At ADP, I scaled an SRE organisation from 4 to 35 engineers across India, Canada, and the US -- defining the hiring strategy, capability roadmap, and on-call governance from scratch, then driving MTTR down 40%+ through AIOps-driven automation. At Charles Schwab, I built a 25-member Platform Engineering team from zero and delivered 99.9% release reliability as part of the TD Ameritrade merger integration. Across all three clients, I governed delivery quality through CPMI -- a KPI framework I designed that tracked cloud maturity, vendor performance, and cost efficiency, presented in executive QBRs and tied to commercial SLAs. Your requirement for named delivery track ownership, KPI cadence, and vendor accountability is not a new discipline for me; it is the operating model I have been running.

On the AI Platforms CoE mandate: I brought production AI capabilities to BMO -- GenAI risk summarisation and Q&A assistants on AWS Bedrock and Azure, with SLA ownership and operational monitoring, not a proof-of-concept. The same production discipline I applied to SRE and platform delivery I applied to AI: define the reliability target, instrument the pipeline, own the outcome. Your IDC needs someone who can stand up an AI CoE that ships to production, and I have done exactly that in a regulated banking environment. My continuous improvement credentials -- PMI-ACP, 6 Sigma Yellow Belt, and ISB General Management Program -- align naturally with Fortive's FBS operating discipline; I thrive in lean, metric-driven cultures where standard work and measurable outcomes are non-negotiable.

I would welcome a conversation about the IDC Director opportunity and am happy to walk through specific delivery outcomes in detail. I am based in India and open to discussing the Bangalore location as part of the broader offer conversation.

Yours sincerely,

Pavan Kumar Nayakanti
