Engineering Division - Site Reliability Engineering

Goldman Sachs, Hyderabad

Re: Site Reliability Engineer - Vice President

Dear Hiring Team,

Goldman Sachs operates one of the most demanding engineering environments in financial services - platforms where reliability is not a feature but a regulatory and commercial obligation. The SRE VP role sits at the centre of that: owning the observability, logging, alerting, and deployment automation infrastructure that every GS engineer depends on, every day. That is precisely the scope I have been operating at for the past nine years, and why I am applying with conviction.

At IRIS Software, I led SRE engagements simultaneously for **ADP, Charles Schwab, and BMO** - not sequentially, but in parallel through a shared services model. At ADP, I defined SLOs, SLIs, and error budgets across a multi-cloud platform, instituted blameless postmortem culture, and built a **full-stack observability platform** (Prometheus, Grafana, Dynatrace) that reduced MTTR by over 40% through Ansible-driven automated remediation and Keptn-based Chaos Engineering. Deploying Chaos Engineering in a regulated financial environment is uncommon - I consider it one of the strongest signals of a mature SRE practice, and it is something I have operationalised in production.

Your job description explicitly calls out **RAG architectures and Prompt Engineering** to automate SRE workflows - incident response summaries, dynamic runbooks, IaC generation. I have already built this in production. For BMO, I architected RAG-based GenAI assistants on **AWS Bedrock** that automated risk summarisation and incident Q&A across BCRG and LTS pipelines, eliminating manual analyst toil and accelerating time-to-insight materially. This is not exploratory work; it is live, in a bank, under compliance oversight. I believe this puts me among a small group of applicants who can speak to both the SRE fundamentals and the GenAI-for-reliability frontier that Goldman Sachs is investing in.

On the leadership side: I built ADP's SRE organisation from **4 to 40 engineers** across India, Canada, and the US, and stood up Charles Schwab's Platform Engineering team from zero. I know what Day 1 of an SRE practice looks like, and I know how to scale it to the point where it runs without me in the room. I have presented reliability strategies, SRE metrics, and incident outcomes directly to C-suite stakeholders - and I understand that at Goldman Sachs, the ability to translate engineering decisions into business and risk language is as important as the engineering itself.

Hyderabad is my first-choice location for this move, and Goldman Sachs is one of a small number of firms where the engineering challenges, the standards, and the scale are genuinely worth the commitment. I would welcome the opportunity to discuss this role in detail.

Sincerely,

**Pavan Kumar Nayakanti**
