Head of AI & Data Platform DevSecOps

Guidehouse | 7 June 2026

Dear Hiring Manager,

The *Command and Control* framing in your job description caught my attention immediately -- because that is the exact operating model I have built twice at Tier-1 banking clients. I did not inherit a running function; I built both from the ground up. That is the experience this role needs.

At IRIS Software, I designed and operationalized L1/L2/L3 support frameworks, SLA/OLA governance, and incident command structures for ADP's 35-person SRE organisation and Charles Schwab's Platform Engineering function. Both were greenfield builds. At ADP, the result was a 40%+ MTTR reduction through structured postmortem culture and automated Dynatrace + Ansible remediation -- plus a Chaos Engineering programme using Keptn that proactively identified fault scenarios before business impact. At Charles Schwab, I defined the Transition-to-Support intake model and "production ready" criteria that prevented premature escalations and protected the engineering team's delivery cadence. At RBC, I established the DORA governance framework with KPI dashboards and executive reporting forums across 250+ applications and 60+ teams -- translating delivery performance into a language the business could act on. These are not adjacent skills. They are the core job.

The AI/Data dimension of this role is the layer that makes it timely. At BMO, I deployed GenAI risk summarisation and Q&A assistants on AWS Bedrock -- and then had to build the production monitoring runbooks, escalation protocols, and operational standards to keep them stable post-launch. That experience showed me what AI/ML platform operations actually requires: not just MLOps tooling, but an operating model designed to handle non-deterministic systems in a production SLA context. That gap is exactly what this function exists to close, and I know how to close it.

On location: my base is Hyderabad, but I am open to Chennai for a mandate with real ownership scope and appropriate relocation support. Building this function from scratch -- with org design authority, governance forums, and executive visibility -- is the kind of role I would relocate for. I would welcome a short call to align on comp range and function scope before either of us invests further.

Yours sincerely,

Pavan Kumar Nayakanti
