LPL Financial Global Capability Centre

Hiring Team -- VP, Technology Resilience

Hyderabad, India

Dear Hiring Team,

LPL Financial is building its GCC in Hyderabad at a moment when technology resilience is no longer a support function -- it is the product. Your JD asks someone to *"define, develop, and execute the overall technology resilience strategy"* and *"oversee DR, BC, and crisis management plans for critical IT systems."* I have done exactly this, at FinTech scale, inside the same regulatory environment LPL operates in.

At **ADP**, I inherited a four-person reactive SRE team and scaled it to 40 engineers across India, Canada, and the US. I built the governance model, the blameless postmortem culture, and the AIOps-driven automated remediation stack -- cutting MTTR by over 40%. At **BMO**, I architected RTO/RPO-aligned disaster recovery into a cloud migration from day one: automated failover on AWS ECS Fargate, tested under production load, audit-ready. At **RBC**, I owned certificate management, vulnerability governance, and automated patching compliance across 250+ applications in a SOX/GDPR-regulated environment -- the same regulatory context that governs LPL's operations.

I also built the **Cloud Platform Maturity Index**, a technology risk assessment framework deployed across three banking clients to identify vulnerabilities, enforce mitigation, and track measurable resilience improvements. It is the closest thing I have seen in practice to what ISO 22301 prescribes. The CBCP certification is a structured 60-day effort I would prioritise on joining.

What draws me to LPL specifically is the mandate: you are not inheriting a mature resilience function -- you are building it. I have done this twice from scratch. The GCC context, Hyderabad base, and US FinTech regulatory rigour are exactly the conditions I have spent nine years preparing for.

Sincerely,

Pavan Kumar Nayakanti
