Hyderabad, India (open to Bangkok relocation)

9 May 2026
Engineering Team
Manatal, Bangkok

Re: Director of Platform Engineering

Dear Hiring Team,

Manatal's platform engineering challenge is exactly the kind I want to own next. You need someone who builds and runs the AWS and Kubernetes platform themselves -- not someone who delegates it down and reviews decks. I have spent 20 years doing both: writing the automation, running the on-call, debugging production failures at 2am, and setting the standards the rest of the team follows. That combination is what this role requires, and it is what I bring.

The clearest evidence is **modeas**, a CI/CD deployment platform I designed and built from scratch at IRIS for ADP. It handled 200+ builds and deployments per hour, with progressive rollout logic, automated rollback, and canary health gates -- all in Terraform and Jenkins, authored by me. It eliminated 10,000+ manual operational hours annually and improved deployment cadence by 600%. I did not manage a team that built it; I built it, then ran it in production. The **Robo Deployment Framework** at RBC is the same story: a self-service CI/CD platform for 250+ enterprise applications, reducing onboarding from 5 weeks to 5 hours -- Python, Ansible, and PowerShell, written end-to-end, with Splunk log pipelines for incident detection integrated from day one.

On reliability: I own it the way your JD describes. I defined SLOs, SLIs, and error budgets across ADP, Charles Schwab, and BMO simultaneously. I ran the on-call rotation for a 35-member SRE team -- not as an escalation point, but as an active participant. I built the observability stack (Prometheus, Grafana, Dynatrace) and the Ansible-driven automated remediation that cut MTTR by 40%+. I established Chaos Engineering with Keptn in a regulated financial environment, which is uncommon and something I am proud of -- it means I have proactively broken production systems in controlled conditions before real failures could.

On Bangkok: I am actively relocating. The opportunity to join a Sequoia-backed SaaS company at this growth stage, in Southeast Asia's most dynamic tech city, is something I have thought through deliberately -- not as a fallback, but as a direction I want to take. I am ready to move, get to work on-site with the team, and own this platform from day one.

Sincerely,

Pavan Kumar Nayakanti
