Technology Resiliency Enablement Office

Northern Trust, Pune

Re: Senior Director - Technology Resiliency Enablement Office (TREO), APAC

Dear Hiring Team,

Northern Trust's TREO mandate is one I recognise clearly: a single accountable executive who owns the APAC technology resilience strategy, embeds it into architecture and governance, and can stand in front of regulators and senior leadership alike with defensible evidence. I have spent the last nine years building exactly that capability -- not as a compliance function, but as an engineering discipline that keeps financial platforms operational when conditions are worst.

The work I am most directly proud of in this context is the **CPMI resilience maturity framework** I built and operated across ADP, Charles Schwab, and BMO simultaneously. It was not a checkbox exercise -- it was a structured model that assessed cloud security, operational efficiency, and recovery capability with measurable KPIs reported at board level. Alongside it, I established a **Chaos Engineering programme at ADP using Keptn**, running proactive fault injection and failover simulations in a regulated financial environment to identify systemic weaknesses before production failures could expose them. I have governed on-call rotations and major incident command for a 35-member global SRE team, delivering executive communications to C-suite stakeholders during live incidents and driving blameless postmortems that produced lasting platform improvements, not just incident closure.

On the architecture side: the **BMO CCB cloud migration** I led was built around disaster recovery from day one -- RTO/RPO-aligned design, CDK-orchestrated ECS Fargate with multi-region HA, automated failover runbooks validated before production cutover, and FinOps governance over the DR estate. This is the kind of work the TREO role requires for the APAC technology estate: resilience embedded into design, not bolted on afterwards. I have also applied AI-enabled resilience in practice -- **GenAI-powered DR runbook generation and incident summarisation on AWS Bedrock for BMO** -- which maps directly to Northern Trust's stated goal of accelerating DR automation and AI-assisted recovery outcomes.

I am based in Pune, where Northern Trust's APAC technology hub operates, and available immediately. The opportunity to own technology resilience at the APAC level for a firm with 130+ years of financial continuity and a genuine commitment to operational stability is one I take seriously. I would welcome the chance to discuss the role in more detail.

Sincerely,

Pavan Kumar Nayakanti
