Hiring Manager

IT Infrastructure Management Lead
SMBC India

Dear Hiring Manager,

SMBC is building a stronger India technology foundation -- converting branches to a local subsidiary, expanding operations across multiple locations, and doing so under active RBI oversight. That is exactly the kind of high-accountability IT environment I have spent 20 years in. I am applying for the **IT Infrastructure Management Lead** role because the scope matches what I own: IT service delivery across locations, continuity of business-critical systems, regulatory compliance, and vendors who deliver what they promise.

My most direct parallel is nine years managing IT operations for regulated global banks. At **RBC Insurance**, I was the single point of contact for IT governance across 250+ applications and 60+ delivery teams -- enforcing SOX/GDPR compliance, managing third-party supplier contracts, and delivering audit-ready change evidence to senior management on every release. At **BMO**, I led the on-premise to AWS migration with HA/DR built in from day one, drove FinOps governance across the cloud estate, and reported on operational efficiency and infrastructure health directly to the Head of IT and C-suite. At **ADP**, I scaled the IT operations team from 4 to 40 engineers across India, Canada, and the US while cutting MTTR by 40% through ITIL-aligned incident management and automated remediation.

On RBI liaison -- I have not interfaced directly with RBI, but I have operated under OSFI, OCC, and SEC-adjacent compliance frameworks for nine years. The audit-readiness requirements, change evidence discipline, and regulatory reporting cadence are consistent across all of them. I would partner with your compliance team in the first 90 days to map existing practices to RBI-specific requirements. That is a translation exercise, not a learning-from-zero exercise.

SMBC India is at an inflection point -- growing the team, formalising the subsidiary, and raising the bar on infrastructure governance. I bring the banking domain credibility, multi-location team leadership, compliance rigour, and cloud delivery capability to build and run that function at the standard the moment requires. I would welcome the opportunity to discuss further.

Sincerely,

Pavan Kumar Nayakanti

Head of IT Infrastructure & Operations | Banking & Financial Services
