Hiring Manager

Platform Engineering Team

Husky Technologies - Chennai (Guindy)

Re: Tech Lead, Platform Engineering (Azure, IaC & DevOps) - Job ID 20856

Your JD asks for someone who can "turn cloud infrastructure, CI/CD pipelines, and guardrails into reusable, automated platform capabilities." That is exactly what I built at IRIS Software - three times over, for ADP, Charles Schwab, and BMO.

The most directly relevant work is the [Cloud Platform Maturity Index \(CPMI\)](#) - a productized IaC framework of Terraform and CDK modules, governance guardrails, and tagging policies deployed as a shared platform across three banking clients. Product teams consumed it; they did not rebuild it. Alongside it, I designed [DevOps-as-a-Service](#) CI/CD pipelines with plan/validate/approval/apply gates, embedded SAST/DAST/IAST scanning (SonarQube, JFrog Artifactory), and SOX/GDPR compliance guardrails. Application onboarding at RBC dropped from five weeks to five hours.

On Azure: AZ-305 certified, production delivery across Azure DevOps governance (250+ apps at RBC), Azure Functions and retrieval pipelines for GenAI assistants at BMO, and full-stack observability (Azure Monitor, AppInsights, Prometheus, Grafana, Dynatrace, Splunk). Key Vault, Container Apps, and AKS are infrastructure I have operated under production SLAs, not features I have read about.

I have also led incident RCA programmes, owned HLD-to-LLD translation, mentored engineers at scale (IRIS Certified Trainer, 200-engineer cohorts), and participated in hiring. The Tech Lead scope in your JD maps directly to how I work today. One practical note: I am based in Hyderabad and would need to discuss relocation or hybrid arrangements - I am open to that conversation.

I would welcome a discussion about how this fits Husky's platform roadmap.

Regards,

Pavan Kumar Nayakanti
